Front Cover: *Hippotamus amphibicus* Linnaeus. Occlusal view of Allenton mandible (F1030) showing canines and molar teeth. The alveoli (sockets) of the four incisors can be seen between the canines. Two large first incisor alveoli at centre with the smaller second incisor alveoli on either side. This is the typical tetraprodont condition as seen in the modern species. (See Jones and Stanley, pp. 259-271 of this issue).
